DETAILED ACTION

This action is in response to Applicant's Amendments filed on November 28,
 2006 have been considered but are deemed moot in view of new ground of rejections below.

2. Claims 1-6, 12-16, 28 and 30 are amended. Claims 23-27 and 31 are withdrawn. And claims 1-22 and 28-30 are presented for this office action.

Claim Rejections - 35 USC § 101

3. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

5. Claims 1-22 and 28-30 are rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter.

As set forth in MPEP 2106 (II) (A):

A. Identify and Understand Any Practical Application Asserted for the Invention

The claimed invention as a whole must accomplish a practical application. That is, it must produce a "useful, concrete and tangible result." State Street, 149 F.3d at 1373, 47 USPQ2d at 1601-02. The purpose of

Art Unit: 2166

this requirement is to limit patent protection to inventions that possess a certain level of "real world" value, as opposed to subject matter that represents nothing more than an idea or concept, or is simply a starting point for future investigation or research (Brenner v. Manson, 383 U.S. 519, 528-36, 148 USPQ 689, 693-96); In re Ziegler, 992, F.2d 1197, 1200-03, 26 USPQ2d 1600,1603-06 (Fed. Cir. 1993)). Accordingly, a complete disclosure should contain some indication of the practical application for the claimed invention, i.e., why the applicant believes the claimed invention is useful.

Apart from the utility requirement of 35 U.S.C. 101, usefulness under the patent eligibility standard requires significant functionality to be present to satisfy the useful result aspect of the practical application requirement. See Arrhythmia, 958 F.2d at 1057, 22 USPQ2d at 1036. Merely claiming nonfunctional descriptive material stored in a computer-readable medium does not make the invention eligible for patenting. For example, a claim directed to a word processing file stored on a disk may satisfy the utility requirement of 35 U.S.C. 101 since the information stored may have some "real world" value. However, the mere fact that the claim may satisfy the utility requirement of 35 U.S.C. 101 does not mean that a useful result is achieved under the practical application requirement. The claimed invention as a whole must produce a "useful, concrete and tangible" result to have a practical application.

Regarding claims 1-3, the claim limitation of claims 1-3, "An electronic information management server for classification and retrieval of documents", raise a question as to whether the claimed invention is directed merely to an abstract idea that is not tied to a producing a concrete, useful, and tangible result to from the basis of

Art Unit: 2166

statutory subject matter under 35 U.S. C. § 101. Claims 1-3 include *no physical* structure of the machine in terms of its hardware or hardware and software combination. Because the limitation of claims 1-3, every "means for" is computer program software system that are not embedded any a computer-readable medium and run by any a computer or machine. Thus, Claims 1-3 are **software per se**. Therefore, the claims are not a statutory system and should be rejected under 35 U.S. C. § 101 as not being tangible.

Regarding claims 1-3, 12-13, 28 and 30, the claimed invention limitation ends with "deleting the information after having checked the condition", which does not provide any tangible and real world application. Therefore, the claims (1-22 and 28-30) are not a statutory system and should be rejected under 35 U.S. C. § 101 as not being tangible.

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States

Art Unit: 2166

only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

5. Claims 1-22 and 28-30 are rejected under 35 U.S.C. 102(e) as being anticipated by Bakker et al (U.S. Patent No. 36,999614, hereinafter, "Bakker").

With respect to claims 1-3, 12-13, 28 and 30, Bakker teaches image feature extracting means for extracting a feature of an image based on an instruction from a client, the feature associated with electronic information stored in storing means connected to a network (fig. 10a, col. 8, lines 34-49), (i.e., by 904 in fig. 9, auto feature, user extracts image features using toolbar-driven, drag and drop method, col. 8, lines 14-34); deciding means for deciding whether the electronic information is to be deleted based on the feature extracted by the image feature extracting means and on a condition specified by the client (i.e., 908, user selects to remove features in fig. 9, col. 8, lines 14-34); and deleting means for deleting from the storing means via the network and via a deletion method specified by the client unnecessary electronic information decided to be deleted by the deciding means, the deleting means includes at least one of means for deleting information that matches a predetermined condition and means for deleting the information after having checked the condition (i.e., 908 in fig. 9, removing user selected defective image features, col. 8, lines 14-34), feature is at least of an aspect ratio of the image, a color distribution information, a brightness distribution information of the image, and an edge distribution information of the image (col. 4, lines 51-67 to col. 5, lines 1-41).

Art Unit: 2166

With respect to claims 4 and 14, Bakker teaches extracted feature is at least one of an aspect ratio of the image, a color distribution information, a brightness distribution information of the image, and an edge distribution information of the image (col. 4, lines 51-67 to col. 5, lines 1-41).

With respect to claims 5 and 15, Bakker teaches decides whether the electronic information is to be deleted based on the client-specified condition including a condition that a first symbol encoded in the image corresponds to a second symbol associated with the electronic information (col. 4, lines 51-67 to col. 5, lines 1-41).

With respect to claims 6 and 16, Bakker teaches decides whether the electronic information is to be deleted based on a feature of a second image similar to the image (col. 4, lines 51-67 to col. 5, lines 1-41).

With respect to claims 7 and 17, Bakker teaches decides that other electronic information related to specific electronic information is also deleted together with the specific electronic information decided to be deleted based on the feature (fig. 9, col. 8, lines 14-34).

With respect to claims 8 and 18, Bakker teaches temporarily storing electronic information sent via a network, wherein the deleting means deletes the unnecessary

Art Unit: 2166

electronic information stored in the temporarily storing means at a predetermined timing (fig. 9, col. 8, lines 14-34).

With respect to claims 9 and 19, Bakker teaches deletes the unnecessary electronic information from the temporarily storing means after a predetermined period of time has elapsed (col. 4, lines 51-67 to col. 5, lines 1-41).

With respect to claims 10 and 20, Bakker teaches instructing and operating means for instructing a feature associated with the electronic information to be deleted (col. 8, lines 14-34).

With respect to claims 11 and 21, Bakker teaches inputting the feature and transferring it to the instructing and operating means (col. 4, lines 51-67 to col. 5, lines 1-41).

With respect to claim 22, Bakker teaches inputting a feature associated with the electronic information to be deleted; and giving a deletion execution instruction to unnecessary electronic information that is to be deleted and extracted from the storing means according to the input feature (col. 8, lines 14-34).

Page 8

Art Unit: 2166

With respect to claim 29, Bakker teaches storing electronic information sent via a network in temporary storing means; deleting unnecessary electronic information stored in the temporary storing means at a predetermined timing (col. 8, lines 14-34).

Conclusion

6. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

7. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Isaac M. Woo whose telephone number is (571) 272-4043. The examiner can normally be reached on 8:00-5:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Hosain T. Alam can be reached on (571) 272-3978. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
